

Soft Care™ Sensisept

A mild, highly effective disinfecting hand washing cream

Soft Care Sensisept brings you:

- Effective cleaning and disinfection
- A high level of user acceptance
- Reduced cross contamination

Effective cleaning and disinfection

Soft Care Sensisept contains chlorhexadine digluconate, a highly effective bactericidal agent, combined with a surfactant system that ensures the removal of greasy soil. The product passes the EN 1499 test, the latest CEN standard.

A high level of user acceptance

To achieve high standards it is essential that staff enjoy using the product. Sensisept contains special surfactants that are mild to the skin and humectants providing good skin care. Because the product offers single stage cleaning and disinfection it is far easier to use than two part systems.

Sensisept keeps on killing micro-organisms for upto 2.5 hours after washing

Reduced Cross Contamination

The chlorhexadine digluconate remains active after hand washing resulting in longer lasting hygiene. The product is also unperfumed to eliminate the risk of contaminating foodstuffs.

The Soft Care Line system is specifically designed to minimise the risk of contamination.

A mild, highly effective disinfecting hand washing cream

Disinfection

Sensisept passes the following CEN tests: EN1040, EN1276, EN12054 and EN 1499. It also has DGHM approval.

Sensisept delivers a high level of immediate disinfection but can also remain effective for up to 150 minutes. Alcohol has no such residual action.

Mildness

Sensisept is unique in blending skin moisturisers and conditioners with a powerful disinfectant.

TEWL test: Sensisept has no negative effect on the barrier function of the skin.

Patch test: Sensisept induced less irritation than the negative control water.

Unique systems ensuring optimal hygiene

Sensisept is available as part of the Soft Care Line range (800ml pouches) and as part of the Soft Care Safe system (1L dispenso bottle).

Soft Care Line can be used across all market sectors; Soft Care Safe is our premium offering for the health care market, but it is also suited for use in a food and beverage or food retail environment.

The pouches and dispenso bottles are hermetically sealed; this prevents contamination by hand or airborne bacteria. Accurate dosing is ensured by the unique dosing pumps part of the 2 systems.

Cartridges and bottles - including the pumps - are disposed of when finished. They crush/shrink when product is used, resulting in reduced waste. Also the materials can easily be recycled.

Sensisept is available as part of the Soft Care Line range in 6x800ml pack and available as part of Soft Care Safe range in 6x1L pack. Also available in 10x1L Ophardt bottle.
